PROFESSIONAL SUMMARY

Cloud and DevOps Engineer with 2.8+ years of combined experience across AWS cloud infrastructure, Linux system administration, networking, and CI/CD automation. Hands-on expertise deploying and managing EC2, VPC, S3, IAM, CloudWatch, and Auto Scaling environments, with Infrastructure as Code using Terraform and Ansible. AWS Certified Solutions Architect – Associate and AWS Certified Cloud Practitioner, currently completing AWS & DevOps Engineer training. Skilled in incident management, Root Cause Analysis (RCA), and building scalable, secure, and highly available systems. Immediate joiner targeting DevOps Engineer, Cloud Engineer, and Site Reliability Engineer (SRE) roles.

TECHNICAL SKILLS

Cloud Platform: Amazon Web Services (AWS)

AWS Services: EC2, VPC, S3, IAM, Security Groups, EBS, RDS, Lambda, Route53, CloudWatch, CloudFront, CDN, Auto Scaling, ALB/ELB

Infrastructure as Code & Configuration Management: Terraform, Ansible

Containerization & Orchestration: Docker, Kubernetes

CI/CD Tools: Jenkins, GitHub Actions

Monitoring & Observability: CloudWatch, Prometheus, Grafana, Log Analysis

Operating Systems & Web Servers: Linux (Amazon Linux, Ubuntu), Nginx, Apache (Basic), Web Hosting

Scripting: Shell, Bash

Version Control: Git, GitHub

Storage Management: S3, EBS, Logical Volume Manager (LVM)

PROFESSIONAL EXPERIENCE

AWS and DevOps Engineer (Internship)

Apr 2026 – Present

Genie US Tech, Pune, India

- Installed, configured, and administered Linux servers (Amazon Linux, Ubuntu) on AWS, performing system setup, user management, and package installation through command-line operations.
- Deployed and managed AWS services including EC2, IAM, S3, Auto Scaling, and Load Balancer to deliver scalable, highly available, and cost-efficient cloud solutions aligned with business requirements.
- Monitored system performance using AWS CloudWatch and configured alerts to enable proactive incident management and reliable operations.
- Led incident management activities, including Root Cause Analysis (RCA) and implementation of preventive strategies to improve system reliability and performance.
- Configured infrastructure security by managing Security Groups, access permissions, and DNS/network connectivity, resolving server-level issues across Linux environments.
- Applied operational best practices to troubleshoot and resolve issues in a high-demand environment, enhancing overall system reliability and performance.

Cloud Engineer

Sep 2023 – Apr 2026

Digitalzone Media Private Limited, Pune, India

- Installed, configured, and administered Linux servers (Amazon Linux, Ubuntu) on AWS, handling system setup, user management, and package installation via command-line operations.
- Collaborated with cross-functional teams to troubleshoot server issues, debug production problems, and improve application reliability.

- Managed version control, code collaboration, and change management using Git in team-based development environments.
- Contributed to agile development cycles, participating in requirement discussions, issue resolution, and iterative releases.

KEY PROJECTS

Production-Ready 3-Tier Web Application on AWS | EC2, VPC, RDS Aurora, ALB, CloudWatch

- Architected and deployed a highly available 3-tier web application on AWS with Multi-AZ architecture, achieving 99.9% uptime and fault tolerance.
- Designed a secure VPC with tier-based network isolation using 5 Security Groups, 3 Route Tables, and least-privilege IAM roles supporting 10+ team functions.
- Reduced AWS costs by 60–70% through instance rightsizing, automated resource management, and proactive identification of idle resources.

End-to-End Infrastructure Automation with Terraform & Ansible | Terraform, Ansible, AWS, Nginx

- Automated provisioning of one Ansible control node and three managed Ubuntu EC2 instances on AWS using Terraform for consistent, repeatable IaC deployments.
- Developed and executed Ansible playbooks to automate Nginx installation, service configuration, and deployment across all managed nodes from a single control point.
- Implemented configuration management practices ensuring uniform server states, reducing manual intervention and improving deployment reliability.

VPC Peering Implementation on AWS using Terraform | Terraform, VPC Peering, EC2

- Provisioned two AWS VPCs and established VPC Peering using Terraform, enabling secure private communication between isolated network environments.
- Automated deployment of VPCs, subnets, route tables, Internet Gateway, and Security Groups through IaC, ensuring consistency and repeatability.
- Validated EC2 instance communication across peered VPCs, demonstrating scalable, highly available, and automated cloud networking architecture.

Load Balancer Configuration for Web Application | AWS ALB, ELB, EC2, Auto Scaling

- Implemented Elastic Load Balancer (ELB) integrated with an EC2 Auto Scaling Group to ensure scalability, high availability, and dynamic traffic handling.
- Configured an Application Load Balancer (ALB) to distribute incoming traffic across multiple EC2 instances, improving fault tolerance and response times.
- Monitored application performance and traffic patterns using CloudWatch to optimize load balancing configurations and enhance user experience.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Cloud Practitioner
- AWS & DevOps Engineer Training (In Progress)
- Java Full Stack Development Training

EDUCATION

Savitribai Phule Pune University

Bachelor of Engineering – Computer Science and Engineering

- CGPA: 8.0/10.0

2022
Pune, India
