PROFESSIONAL SUMMARY

Results-driven IT professional transitioning into Cloud & DevOps, currently pursuing Cloud DevOps training with hands-on experience in AWS infrastructure, Linux system administration, and network configuration. Bringing 2.8+ years of combined experience across Cloud, DevOps, Linux Administration, Networking, and UI Development, with active cloud internship exposure in EC2, VPC, Nginx, and CloudWatch. Passionate about building scalable, secure, and reliable cloud-based systems. Immediate joiner ready to contribute to DevOps and cloud roles.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS)

AWS Services: EC2, VPC, S3, CloudWatch, CloudFront, CDN, IAM, Security Groups, EBS, RDS, Lambda, Route53, Auto Scaling, ALB/ELB

Infrastructure as Code & Config Mgmt: Terraform, Ansible

Containerization & Orchestration: Docker, Kubernetes

CI/CD Tools: Jenkins, GitHub Actions

Monitoring & Observability: CloudWatch, Prometheus, Grafana, Log Analysis

Web Servers: Nginx Configuration, Apache (Basic), Web Hosting

Scripting: Shell, Bash

Version Control: Git/GitHub

Storage Management: S3, EBS, Logical Volume Manager

PROFESSIONAL EXPERIENCE

AWS and DevOps Engineer | Internship

Apr 2026 – Present

Genie US Tech

Pune, India

- Installed, configured, and administered Linux servers (Amazon Linux, Ubuntu) on AWS, performing system setup, user management, and package installations using command-line operations.
- Gained valuable experience in troubleshooting and resolving issues within a high-demand environment, while implementing best practices to enhance system reliability and performance.
- Utilized AWS CloudWatch to monitor system performance, configure alerts, and ensure proactive incident management.
- Gained valuable experience in incident management, including Root Cause Analysis (RCA) and implementation of preventive strategies.
- Effectively used AWS services such as EC2, IAM, S3, Auto Scaling, and Load Balancer to deliver scalable, highly available, and cost-efficient cloud solutions aligned with business requirements.
- Performed infrastructure troubleshooting and security configuration by managing Security Groups, access permissions, DNS/network connectivity, and resolving server-level issues in Linux environments.

Cloud Engineer

Sep 2023 – Apr 2026

Digitalzone Media Private Limited

Pune, India

- Installed, configured, and administered Linux servers (Amazon Linux, Ubuntu) on AWS, performing system setup, user management, and package installations using command-line operations.
- Collaborated with cross-functional teams to troubleshoot server issues, debug production problems, and improve application reliability.
- Used Git for version control, code collaboration, and change management in team-based development environments.
- Worked in agile development environments, participating in requirement discussions, issue resolution, and iterative releases.

KEY PROJECTS

Load Balancer Configuration for Web Application | *AWS ALB, ELB, EC2, Auto Scaling*

- Implemented Elastic Load Balancer (ELB) to ensure scalability and high availability integrated with EC2 Auto Scaling Group for dynamic traffic handling.
- Configured an Application Load Balancer (ALB) to distribute incoming traffic across multiple EC2 instances, improving fault tolerance and response times.
- Monitored application performance and traffic patterns using CloudWatch to optimize load balancing configurations and enhance overall user experience.

Production-Ready 3-Tier Web Application on AWS | *EC2, VPC, RDS Aurora, ALB, CloudWatch* | [GitHub](#)

- Architected and deployed a highly available 3-tier web application on AWS with Multi-AZ architecture achieving 99.9% uptime and fault tolerance.
- Designed a secure VPC with tier-based network isolation using 5 Security Groups, 3 Route Tables, and least-privilege IAM roles supporting 10+ team functions.
- Achieved 60–70% AWS cost reduction through instance rightsizing, automated resource management, and proactive identification of idle resources.

End-to-End Infrastructure Automation with Terraform & Ansible | *Terraform, Ansible, AWS, Nginx*

- Automated provisioning of one Ansible Control Node and three managed Ubuntu EC2 instances on AWS using Terraform for consistent, repeatable IaC deployments.
- Developed and executed Ansible Playbooks to automate Nginx installation, service configuration, and deployment across all managed nodes from a single control point.
- Implemented configuration management practices ensuring uniform server states, reducing manual intervention and improving deployment reliability.

VPC Peering Implementation on AWS using Terraform | *Terraform, VPC Peering, EC2*

- Provisioned two AWS VPCs and established VPC Peering using Terraform, enabling secure private communication between isolated network environments.
- Automated deployment of VPCs, subnets, route tables, Internet Gateway, and Security Groups through IaC, ensuring consistency and repeatability.
- Validated EC2 instance communication across peered VPCs, demonstrating scalable, highly available, and automated cloud networking architecture.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

AWS Certified Cloud Practitioner

AWS & DevOps Engineer Training (*In Progress*)

Java Full Stack Development Training

EDUCATION

Savitribai Phule Pune University

Bachelor of Engineering – Computer Science and Engineering

- CGPA: 8.0/10.0

Pune, India

2022
